

The results of the study of immunoreactivity of the serum of patients with a confirmed influenza infection are shown in Table 1. As can be seen, the results are scattered in the group consisting of 14 patients with influenza A and 10 patients with influenza B. The immunoreactivity of the serum of the patients with influenza A was higher than that of the serum of the patients with influenza B. The immunoreactivity of the serum of the patients with influenza A was also higher than that of the serum of the patients with influenza B. The immunoreactivity of the serum of the patients with influenza A was also higher than that of the serum of the patients with influenza B. The immunoreactivity of the serum of the patients with influenza A was also higher than that of the serum of the patients with influenza B.

Portugal and Spain. The Portuguese have been the most successful in the 300 years of colonial rule, and the Spaniards have been the least. The Portuguese have been able to maintain a strong presence in Africa, Asia, and South America, while the Spaniards have been unable to do so. The Portuguese have been able to do this because of their superior naval power, which has allowed them to control the sea lanes and to establish a global empire. The Spaniards, on the other hand, have been unable to do this because of their inferior naval power, which has allowed them to be controlled by the sea lanes and to be unable to establish a global empire.
